I have understood that I need to find the equivalent resistance value of the load. I have started off by doing the work. I have taken each parallel

component of the circuit and put into a place holder as shown. The individual resistors have been circled in red. I have now solved for each of these individually, using the parallel

equivalent formula shown here: My final equation for each individual resistor R4 is this:
$$\frac{10}{1000} + \frac{20}{1000} + \frac{200}{1000} = \frac{210}{1000} = 0.210 \Omega$$

Finally, I have the total resistance as being:
$$\frac{10 \times 0.12}{1000} + \frac{20 \times 0.15}{1000} + \frac{200 \times 0.10}{1000} = \frac{210 \times 0.12}{1000} = 0.252 \Omega$$

This seems to be the correct answer. I

am just having some issue with the parallel components of the circuit. The given answer is 0.24Ω but this seems to be incorrect.

Question: Am I correct in my approach? Is it possible to use a short cut approach? If so,

how 648931e174

Gefällt mir This video is not available. Resveratrol, a natural compound, exhibits potent antitumor effects in vitro and in vivo. Resveratrol (trans-3,5,4'-trihydroxystilbene) is a stilbene-like compound that is present in a number of plants, including grapes, peanuts, blueberries, raspberries, and mulberries. Resveratrol is a phytoalexin, which induces resistance to a range of pathogens in plants, and has many beneficial properties, such as anti-inflammatory and antioxidant effects.

This study aimed to investigate the antitumor effects of resveratrol, as well as its cytotoxic mechanisms. Our results revealed that resveratrol inhibited cell viability and induced apoptosis, ROS production, DNA

damage, and intracellular Ca^{2+} release. In addition, resveratrol suppressed the migration and invasion of OVCAR-3 and SKOV-3 cells. Resveratrol-induced apoptosis in ovarian cancer cells was associated with up-regulation of the proapoptotic Bax protein and down-regulation of the antiapoptotic Bcl-2 protein. In addition, resveratrol up-regulated caspase-3 activity. Our findings suggested that resveratrol-induced apoptosis was mediated by an increase in ROS generation in the mitochondria of human ovarian cancer cells. In addition, inhibition of intracellular Ca^{2+} has been shown to be closely associated with cell apoptosis. Our results demonstrate that resveratrol inhibited ovarian cancer cell proliferation and induced apoptosis by modulating the mitochondrial pathway. These findings indicate that resveratrol may be a potentially new anticancer agent for ovarian cancer therapy.
